

SDRM202

Static / Dynamic Resistance Measurement

Accessory for TM1800 / TM1700 / EGIL

- **Enables resistance measurement on circuit breakers**
- **Small and light weight**
- **A number of operations can be run with short waiting intervals**

DESCRIPTION

The SDRM202 is an accessory for TM1800, TM1700, and EGIL. The EGIL must be equipped with the SDRM option and CABA Win version R03A or higher is needed.

The SDRM202 is intended to use for both static and dynamic resistance measurements (SRM and DRM) on high voltage circuit breakers or other low resistive devices. Used together with TM1800, TM1700, or EGIL the current and also the voltage-drop across the circuit breaker contacts are measured. The measuring unit can thus calculate the resistance as a function of time.

A system consists of an SDRM202 unit with current cables and an SDRM Cable which comes in three versions, for TM1800/1700 and EGIL respectively. The SDRM Cable is a small box with integrated cables for connection to the SDRM202 and to TM1800, TM1700 or EGIL.

HOOK-UP EXAMPLES AND CABLE DESIGNATIONS

Timing cable is included with the TM1800 timing module. Transducer cable is selected together with the the type of transducer used.
