NTT-AT OPTICAL CONNECTOR CLEANER LINEUP
NEOCLEAN™ CLETOP™ OPTIPOP™ SERIES

The pioneer in optical connector cleaners,
brings to you the highest quality cleaning tools.

Supporting reliability in telecommunications service: NTT-AT's Optical Connector Lineup

The cause of many troubles in optical communication equipment is contamination on the end face of optical connectors. NTT Advanced Technology's optical connector cleaners use fiber developed specifically for optical connectors, so even the smallest contaminants not visible to the naked eye are removed. Engineered with both highly portable compact designs and ease of operation in mind, and since no cleaning fluids are necessary there are no special needs for the operating environment either. We have prepared a full lineup of cleaners compatible with every type of optical connector. Please put our technology to work for you.

Why is cleaning optical connectors so important?

Optical connector end face is easily contaminated, and when contaminants adhere to the 10µm diameter optical fiber core, there is a high chance of transmission quality being affected. Since there is also the danger of fiber end face being damaged by high power light, cleaning is necessary before making a connection.
